

Use Case Diagram

- **Use Case Diagram** captures the system's functionality and requirements by using actors and use cases.
- Use Cases model the services, tasks, function that a system needs to perform. Use cases represent high-level functionalities and how a user will handle the system.
- Use-cases are the core concepts of Unified Modeling language modeling.
- In brief, the purposes of use case diagrams can be said to be as follows
 - Used to gather the requirements of a system.
 - Used to get an outside view of a system.
 - Identify the external and internal factors influencing the system.
 - Show the interaction among the requirements are actors.
